**5 corners family practice: Family Medicine** J. L. Buckingham, E. P. Donatelle, W. E. Jacott, M. G. Rosen, Robert B. Taylor, 2013-06-29 JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. ! The Commission proceeded to recommend the education and training of substantial numbers of Primary Physicians who would, by assuming primary responsibility for the patient's welfare in sickness and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education. There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S.

**5 corners family practice: Family Medicine** John L. Buckingham, E.P. Donatelle, Thomas A. Jr. Johnson, Joseph E. Scherger, Robert B. Taylor, 2013-11-21 New material in a new format is contained in this third edition of Family Medicine. The comprehensive text nevertheless remains true to the goal of previous editions in offering a scientific approach to health and illness within the context of the family. Using up-to-date clinical material, the book demonstrates how the family physician may provide comprehensive health care to persons of all ages. The first part of Family Medicine discusses such topics as the conceptual basis of family as discipline and specialty, problem differentiation, family-centered health care, longitudinal care, clinical reasoning, and resource management. The second part explores both problems related to organs and systems and problems related to the person, family and community, including: pregnancy, care of infants, children, adolescents, and the elderly; behavioral and psychiatric problems; emergency and critical care; sports medicine; alcoholism and substance misuse; environmental health; and neoplastic and infectious diseases. Family Medicine, with its greatly expanded in-depth coverage of the most commonly encountered clinical core problems and procedures in family medicine, continues to be a textbook written and edited by family physicians for family physicians.

**5 corners family practice: What Doctors Feel** Danielle Ofri, MD, 2013-06-04 "A fascinating journey into the heart and mind of a physician" that explores the doctor-patient relationship, the flaws in our health care system, and how doctors' emotions impact medical care (Boston Globe) While much has been written about the minds and methods of the medical professionals who save our lives, precious little has been said about their emotions. Physicians are assumed to be objective, rational beings, easily able to detach as they guide patients and families through some of life's most challenging moments. But understanding doctors' emotional responses to the life-and-death dramas of everyday practice can make all the difference on giving and getting the best medical care. Digging deep into the lives of doctors, Dr. Danielle Ofri examines the daunting range of emotions—shame, anger, empathy, frustration, hope, pride, occasionally despair, and sometimes even love—that permeate the contemporary doctor-patient connection. Drawing on scientific studies, including some surprising research, Dr. Ofri offers up an unflinching look at the impact of emotions on health care. Dr. Ofri takes us into the swirling heart of patient care, telling stories of caregivers caught up and occasionally torn down by the whirlwind life of doctoring. She admits to the humiliation of an error that nearly killed one of her patients. She mourns when a beloved patient is denied a heart transplant. She tells the riveting stories of an intern traumatized when she is forced to let a newborn die in her arms, and of a doctor whose daily glass of wine to handle the frustrations of the ER escalates into a destructive addiction. Ofri also reveals that doctors cope through gallows humor, find hope in impossible situations, and surrender to ecstatic happiness when they triumph over illness.

**5 corners family practice:** *Family Medicine* A.K. David, T.A.Jr. Johnson, D.M. Phillips, J.E. Scherger, Robert B. Taylor, 2013-06-29 Much is new in Family Medicine since the last edition of our textbook. For example, not only is the therapy of human immunodeficiency virus (HIV) disease and the acquired immunodeficiency syndrome (AIDS) much different than a few years ago; the epidemiology of the disease has also changed and more than half of the family physicians in a rural state such as Oregon have already managed patients with HIV disease or AIDS. 1 There are new immunization recommendations for children and new antibiotics for the treatment of bacterial infections. Computers are bringing medical informatics and on-line consultation into office practice. Medicare physician payment reform is underway and the reality of rationing medical care has been recognized. There has been a recent increase in student interest in a family practice career,2 coincidental with a Council on Graduate Medical Education (COGME) recommendation that at least 50 percent of all residency graduates 3 should enter practice as generalists. Also there is increasing awareness of the need for a 4 Center for Family Practice and Primary Care at the National Institutes of Health. This all-new fourth edition is intended to present the scientific and practical basis of family medicine with special attention to what's new in family medicine. The emphasis is on how the physician provides continuing and comprehensive care for persons of all ages, with clinical content selected from the perspective of family physicians. The format of the book, like the practice of family medicine, continues to change.

When a child is offered a space to relax the “busy mind,” his experience is comparable to mindfulness meditation. Therapists can help children remain in this calm state—in the state of the present moment—if they have the right tools and techniques to do so. During this stillness, a child can reach a level of consciousness that is parallel to the deepened awareness that occurs during mindfulness meditation. Conducting play sessions in this stage allows for healing and progress. Not only can the symptoms of children’s pain be reduced in intensity and duration, but their self-esteem can be enhanced. This book presents a new and comprehensive framework for helping children through play therapy within the context of the family and incorporating ideas from the practice of mindfulness. This experience-based therapeutic model respectfully derives from the best roots of traditional family therapy and play therapy modalities. Additionally, it draws from child development theory, interpersonal neurobiology, and mindfulness. Either spontaneous play or directed play can be used according to the need.

**5 corners family practice: *Life in a Corner*** Robert S. McPherson, 2015-04-27 Community building in the Four Corners area of southeastern Utah required specialized knowledge and a good bit of determination on the part of settlers who wrested a livelihood from the Colorado Plateau.

Robert S. McPherson, the region's leading historian, draws on oral history and personal archives to write about cowboys and homesteaders, loggers and sawmill operators, law enforcement officers and bootleggers, miners and midwives, trappers and builders. In *Life in a Corner*, he shapes their stories into a fascinating mosaic of cultural and environmental history unique to this region. McPherson demonstrates that, above all, settlers worked hard in order to succeed in this often forbidding land. A first-person account of erecting a Latter-day Saint tabernacle tells of volunteers using only what was under their feet or came from a nearby mountain. Other chapters give an insider's perspective on cowboying in canyon country, bringing law and order to a virtually lawless land, waging war against wolves and coyotes, and homesteading on some of the last large desert tracts in the continental United States. But the most gripping stories center on the ingenuity of those who lived these personal experiences. Only a veteran trapper would think of burying an alarm clock to attract a coyote. Only a determined bootlegger would devise a saddle made of leather-covered copper equipped with a spigot to dispense moonshine by the cup. Only committed, or desperate, miners would sail with a one-way "ticket" to a gold field in a hidden desert chasm. What were midwives being taught at the turn of the century, and how did their practice involve equal parts religious doctrine and medical procedure? What was a qualifying examination like for the first forest rangers? And how did small close-knit communities handle "slackers" during World War I? *Life in a Corner* answers these and many other questions while offering fresh perspectives on past events and current controversies.
