airfield operations officer qualification training course: A History of Army Aviation 1950-1962 Richard P. Weinert, Susan Canedy, Army Training & Doctrine Command, 2011 U.S. Army aviation expanded dramatically in both size and breadth of activities after its inception in 1942, but much of its post-World War II history, particularly after the establishment of the Air Force as an independent service by the national Security Act of 1947, has been relatively neglected. Despite a certain amount of jockeying for position by both services, particularly in the early years after their separation, the Army was able to carve out a clear transport and operational combat role for its own air arm. A History of Army Aviation - 1950-1962 examines the development of the Army's air wing, especially for air support of ground troops, both in terms of organization and in relation to the ongoing friction with the Air Force. After describing the rapid expansion of purely Army air power after 1950 and the accompanying expansion of aviation training, the book delves into the reorganization of aviation activities within a Directorate of Army Aviation. It also provides a valuable account of the successful development of aircraft armament, perhaps the most significant advance of this period. In particular, intensive experimentation at the Army Aviation School led to several practical weapons systems and helped to prove that weapons could be fired from rotary aircraft. This arming of the helicopter was to have a profound effect on both Army organization and combat doctrine, culminating in official approval of the armed helicopter by the Department of the Army in 1960. A History of Army Aviation - 1950-1962 also explores the development of new aircraft between 1955 and 1962, including the UH-1 medical evacuation, transport, and gunship helicopter and the HC-1 cargo copter. In addition, the book discusses the Berlin Crisis of 1961 as an impetus for immediate and unexpected expansion of army aviation, quickly followed by the beginnings of intervention in Vietnam by the end of 1962.

airfield operations officer qualification training course: Organizing and Training Airfield Operations Capabilities for Emerging Expeditionary Operations John A. Ausink, 2023 Airfield operations (AO) officer and enlisted career fields provide air traffic control; airfield

management; and radar, airfield, and weather systems services for the U.S. Air Force (USAF), in-garrison and deployed, during peacetime and across the competition continuum. The objective of this project is to identify ways to enhance the ability of the AO career fields to respond to the needs created by the Dynamic Force Employment (DFE) concept and the USAF implementation of Agile Combat Employment (ACE). The research team on this project used three research streams. A review of USAF and joint documents related to the AO career fields provided background for AO doctrine and missions. Interviews, informal discussions, and other interactions with a variety of subject-matter experts and key stakeholders illuminated current challenges for accomplishing AO missions and highlighted the potential impact of new demands on AO that could result from DFE and ACE approaches. Finally, using AO personnel data and current approaches to ACE concepts, R-based tools were developed to estimate and visualize potential AO demands and available supply that were used to evaluate the ability of AO personnel to meet future demands.

He relates his memories of the second Great War, of his experiences joining the Royal Navy as an apprentice, and of his time in many parts of Africa. Tom recalls his experiences in an anti-terrorist unit, of sailing around the world in a 30-foot boat and being chased by pirates off the coast of Columbia, and then being wrecked off the coast of New Zealand in a hurricane. Throughout the autobiography Tom, Tom Edwards has maintained a sense of humour and tells things as he remembers them. No autobiography is completely true, but it is as near the truth as circumspection allows. If Tom's recall of events and dates fail in some areas, you must forgive him, as an eighty-two-year-old mind has its limitations. Tom can recall Edward the Eighth's abdication speech verbatim and his mother's co-op number from seventy years ago, but events chronologically closer often elude him.

airfield operations officer qualification training course: *Defending Air Bases in an Age of*

Insurgency Shannon Caudill, Air University Press, 2014-08 This anthology discusses the converging operational issues of air base defense and counterinsurgency. It explores the diverse challenges associated with defending air assets and joint personnel in a counterinsurgency environment. The authors are primarily Air Force officers from security forces, intelligence, and the office of special investigations, but works are included from a US Air Force pilot and a Canadian air force officer. The authors examine lessons from Vietnam, Iraq, Afghanistan, and other conflicts as they relate to securing air bases and sustaining air operations in a high-threat counterinsurgency environment. The essays review the capabilities, doctrine, tactics, and training needed in base defense operations and recommend ways in which to build a strong, synchronized ground defense partnership with joint and combined forces. The authors offer recommendations on the development of combat leaders with the depth of knowledge, tactical and operational skill sets, and counterinsurgency mind set necessary to be effective in the modern asymmetric battlefield.

airfield operations officer qualification training course: *Building Toward an Unmanned Aircraft System Training Strategy* Bernard Rostker, 2014 Unmanned aircraft systems (UASs) have become increasingly prevalent in and important to U.S. military operations. Initially serving only as reconnaissance or intelligence platforms, they now carry out such other missions as attacking enemy forces. The swift expansion in their numbers and in the demand for their employment has, however, significantly increased demands on logistics and training systems. The challenge is not simply training system operators but also training operational forces and their commanders to integrate the systems into combat operations. Much of that aspect of training has thus far happened as units employ the systems in actual operations - essentially, on-the-job training. UAS training, particularly for the employment of UASs, now needs to be integrated more formally and cost-effectively into service and joint training programs. This report develops a general concept for training military forces in employment of UASs and a framework for addressing the training requirements and discusses the limits of existing infrastructure in supporting UAS training. Interoperability among services is another issue, because services have thus far mainly developed training suitable for their own needs. But the services have established a set of multiservice tactics, techniques, and procedures for UASs, which should facilitate interoperability training. At present, units are not always ready for joint training, so the focus should be on improving training at the unit level in the employment of UAS capabilities, with the overall guiding principle being to train as we fight.
